DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 1, line 24, "firth" has been changed to read ---fifth---

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Allowable Subject Matter

Claims 1-6 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not teach or suggest a projection zoom lens with a first lens group having a negative refracting power, a second lens group having a positive refracting power, a third lens group having a negative refracting power, a fourth lens

group having a positive refracting power and a fifth lens group having a positive refracting power, where the fifth lens group is stationary and the first, second, third and fourth lens groups are shifted along the optical axis during zooming as well as satisfying the recited lens group structural configurations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Mihara, Nakayama et al, Tanaka ('960), Shibata and Tanaka ('886) are all cited to show zoom lens systems having a (- + - + +) configuration, but do not teach the specifically claimed lens group movements and lens group structure. In Mihara, the third lens group is fixed (during zooming). In Nakayama, the first and fifth lens groups are fixed (during zooming). In both Tanaka references, the third and fifth lens groups are stationary (during zooming).
